

PRINCIPAL DIAGNOSIS: , Buttock abscess, ICD code 682.5.,PROCEDURE PERFORMED:, Incision and drainage (I&D;) of buttock abscess.,CPT CODE: , 10061.,DESCRIPTION OF PROCEDURE: ,Under general anesthesia, skin was prepped and draped in usual fashion. Two incisions were made along the right buttock approximately 5 mm diameter. Purulent material was drained and irrigated with copious amounts of saline flush. A Penrose drain was placed. Penrose drain was ultimately sutured forming a circular drain. The patient's drain will be kept in place for a period of 1 week and to be taken as an outpatient basis. Anesthesia, general endotracheal anesthesia. Estimated blood loss approximately 5 mL. Intravenous fluids 100 mL. Tissue collected. Purulent material from buttock abscess sent for usual cultures and chemistries. Culture and sensitivity Gram stain. A single Penrose drain was placed and left in the patient. Dr. X attending surgeon was present throughout the entire procedure.
