

PREOPERATIVE DIAGNOSIS: , Right breast mass with atypical proliferative cells on fine-needle aspiration.,POSTOPERATIVE DIAGNOSIS:, Benign breast mass.,ANESTHESIA: , General,NAME OF OPERATION:, Excision of right breast mass.,PROCEDURE:, With the patient in the supine position, the right breast was prepped and draped in a sterile fashion. A curvilinear incision was made directly over the mass in the upper-outer quadrant of the right breast. Dissection was carried out around a firm mass, which was dissected with surrounding margins of breast tissue. Hemostasis was obtained using electrocautery. Frozen section exam showed a fibroadenoma with some proliferative hyperplasia within the fibroadenoma, but appeared benign. The breast tissues were approximated using 4-0 Vicryl. The skin was closed using 5-0 Vicryl running subcuticular stitches. A sterile bandage was applied. The patient tolerated the procedure well.,
